

Cooling System Flush™ (Mi-CSF™)

Description:

- Unique formulation design to remove dust, grit, oil grease and rust in cooling system.
- Mild formulation that is environmentally friendly.
- Suitable for all metals.
- Does not affect rubber hose or seals
- Meets phosphate-free requirements of European manufacturers.
- Meets silicate-free requirements of Japanese manufacturers.

Suitable for:

- ★ Passenger gasoline and diesel engine cars radiator system.
- ★ Heavy duty diesel engine cooling system.
- ★ Construction plants & equipment cooling system.
- ★ Small and medium generators cooling system (less than 1,000KVA)

Instruction for use:

- ✓ Follow engine manufacturer's instruction on flushing of cooling system
OR
- ✓ Drain-off old coolant in the system.
- ✓ Add 1 part of Miyabi Cooling System Flush™ with 5 parts of water and run the cooling system for 10 minutes. Check cooling water reservoir every 3 minutes to ensure there is sufficient water.
- ✓ Drain-off the system and re-fill it again with fresh water and run the system for another 10 minutes.
- ✓ Drain-off the system and fill it up with Miyabi Tropical Engine Coolant™.

Packing:

- 5-liter and 25 liter and 200-liter packing.
